THREE THINGS TO KNOW

1. Chinese consumers drove major retail gains for smart gadgets and AI pets during the National Day holiday.
2. The Supreme Court is weighing whether local governments can sue oil companies in state court over climate change costs.
3. MIT astronomers discovered a unique star system 300 light-years away where a star is slowly devouring a brown dwarf.

AI Hardware Spending Surges Across China During National Day Holiday

Chinese consumers embraced smart gadgets, from AI pets to smart appliances, driving major retail gains during the week-long National Day holiday break.

- Shoppers throughout China flocked to retail outlets to test and purchase emerging AI gadgets during the holiday week. [bignewsnetwork.com]

  > “Shoppers crowded into stores across China to try the latest artificial intelligence (AI) gadgets during the week-long National Day holiday”

- Suning.com reported substantial year-on-year increases in both customer visits and smart appliance sales during the first week of October. [bignewsnetwork.com]

  > “foot traffic at its flagship stores rose 50 percent year-on-year from Oct. 1 to 7, while sales of AI-equipped home appliances climbed more than 40 percent.”

- China's robotics manufacturing accounted for the vast majority of global humanoid robot shipments in 2025. [bignewsnetwork.com]

  > “China had more than 140 humanoid robot developers in 2025, with shipments reaching 14,400 units -- accounting for 84.7 percent of the global market”

- Retail executives observed that consumer interest in artificial intelligence technology is shifting toward widespread market integration. [bignewsnetwork.com]

  > “Consumer uptake of AI products is accelerating from a phase of novelty toward mass adoption”

Climate-Aware Landscaping Reshapes Modern Real Estate Development

Real estate developers are shifting toward climate-smart landscaping to combat urban heat and water scarcity while enhancing property value.

- Traditional real estate choices historically relied on location, price, and layout, with landscaping used mainly as an aesthetic finishing touch. [timesofindia.indiatimes.com]

  > "For decades, real estate decisions have been driven by three familiar factors: location, price and layout."

- Urban centers face heightened environmental pressures like the urban heat island effect due to concrete buildings and reduced vegetation. [timesofindia.indiatimes.com]

  > "This change is particularly important in urban centers, where concrete buildings, asphalt streets and reduced vegetation add to the urban heat island effect."

- Maintaining traditional, resource-heavy landscapes can lead to high running costs and prove difficult to sustain during extreme weather. [timesofindia.indiatimes.com]

  > "keeping these landscapes intact can be an expensive endeavour."

- Micro-climate infrastructure utilizes native plant canopies

to significantly reduce outdoor temperatures and minimize irrigation needs.

[timesofindia.indiatimes.com]

> “Micro-Climate Infrastructure which is the new trend reduces outside air temperature by 2°C to 5°C using native plant canopy and vegetation”

In the image: A fisheye upward perspective of tall urban apartment buildings framing a bright blue sky.

MIT Astronomers Discover Star Slowly Devouring Brown Dwarf Companion

Researchers found a unique stellar system 300 light-years away where a small star steadily feeds on a brown dwarf for billions of years.

- MIT astronomers discovered a unique system located about 300 light-years away where a small star is slowly consuming a brown dwarf.

  [sciencedaily.com]

  > “Scientists discovered a star slowly eating its brown dwarf companion in a cosmic feast that could last billions of years.”

- The transfer of material is occurring so gradually that the feeding process could persist for billions of years rather than ending in a rapid swallow. [sciencedaily.com]

  > “Instead of swallowing the thing up, the star can gradually eat it, for billions of years.”

- The system is designated as ZTF J0440+2325 and was identified through unusual repeating triangular signals in brightness data.

  [sciencedaily.com]

  > “The system, designated ZTF J0440+2325, lies within our Milky Way galaxy approximately 300 light-years away.”
